Customer Success Engineer

Unlock Factory Insights: No-Code Dashboards with Ignition + SQUEAKS

In Today's Work Environment

Each team member is accountable for monitoring roughly six to twelve key metrics and KPIs on a daily basis.

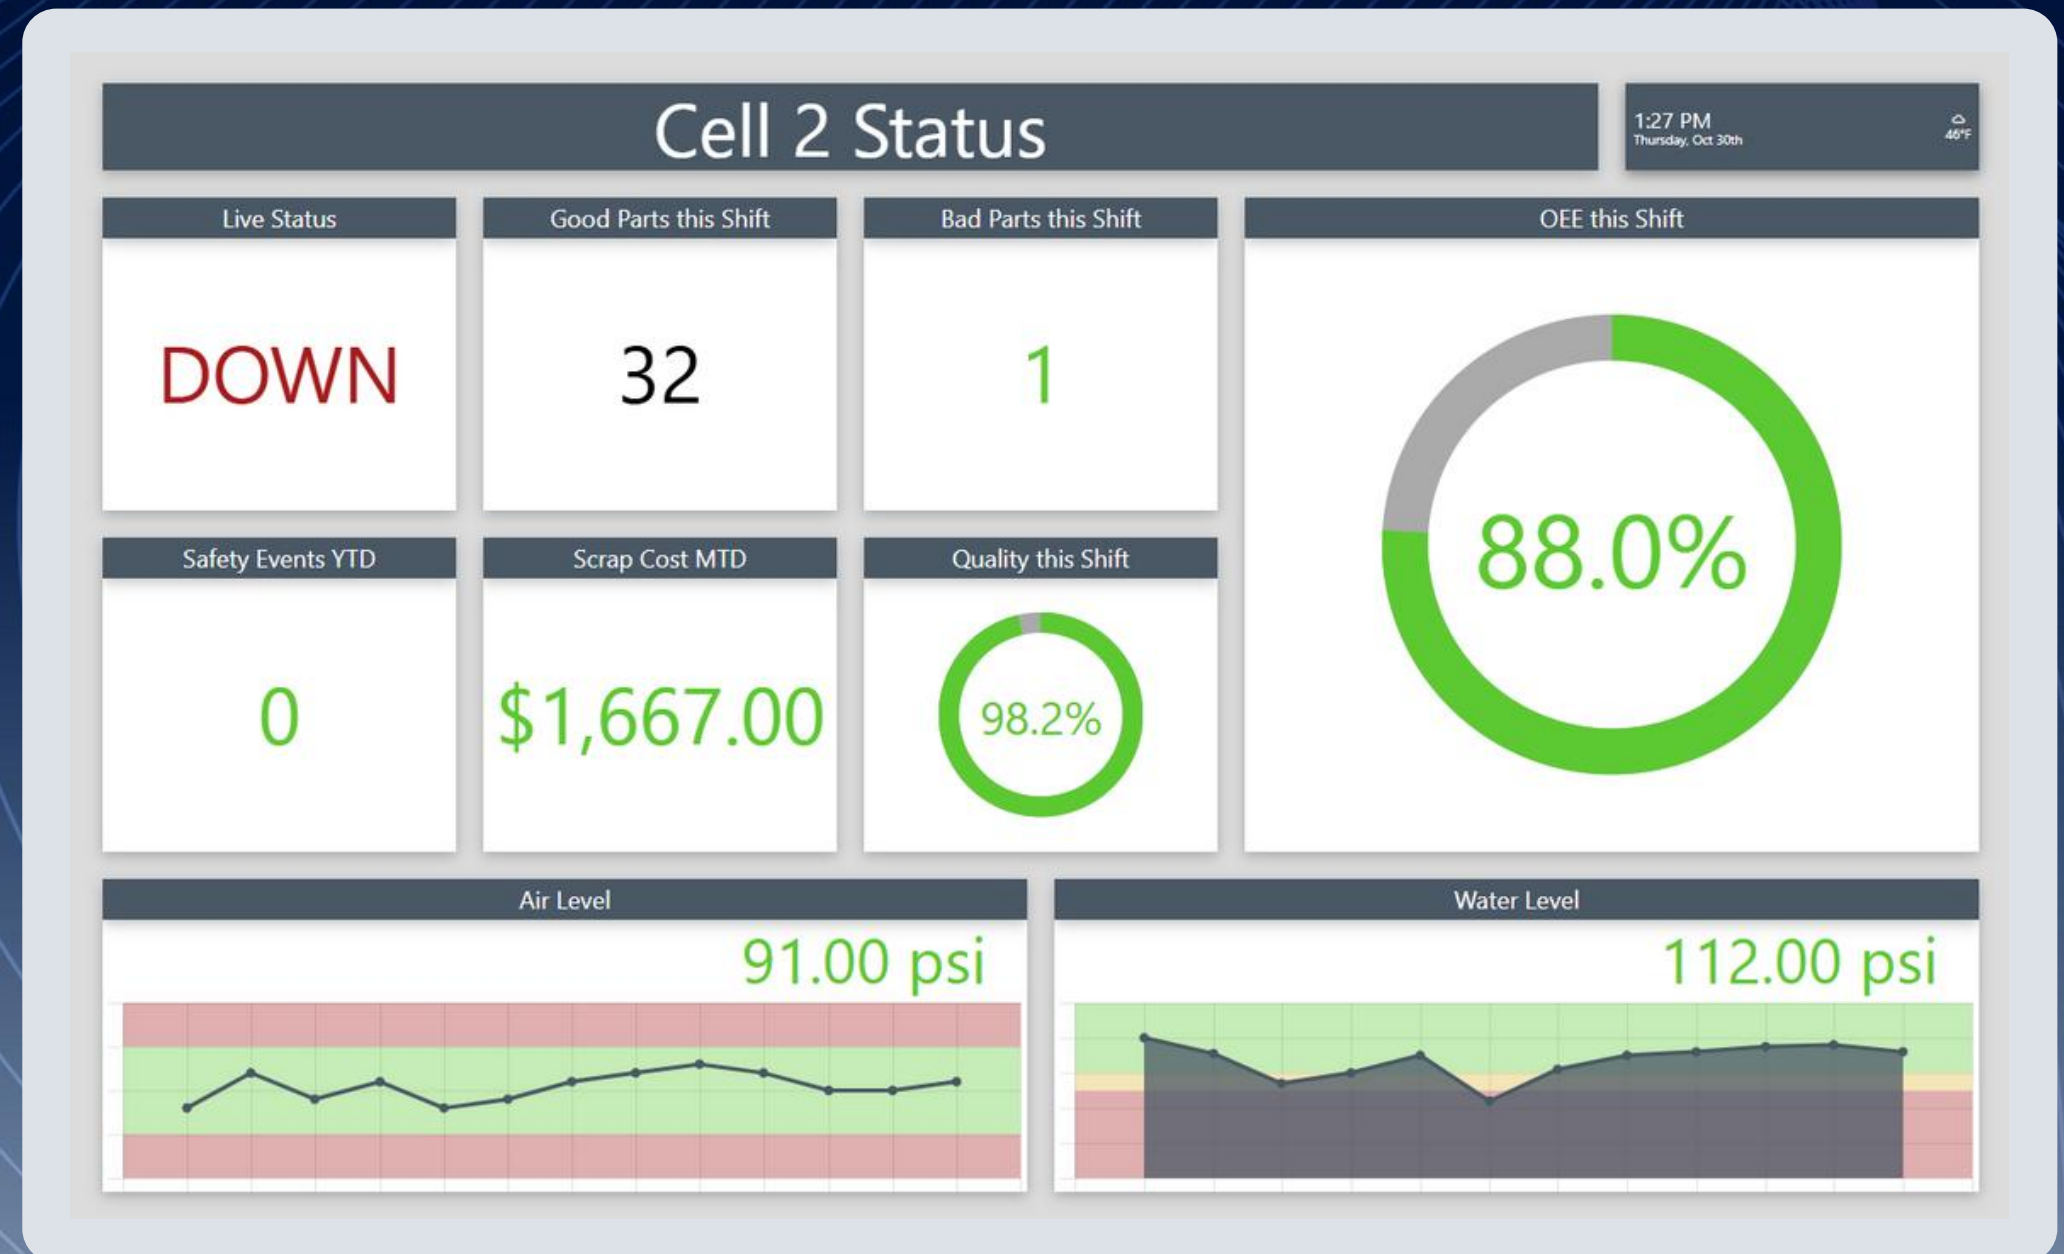

These KPIs originate from multiple data sources, including Ignition, Computerized Maintenance Management Systems (CMMS), Enterprise Resource Planning (ERP), Manufacturing Execution Systems (MES), and more.

Team members need continuous visibility into KPI trends and a simple, organized way to access and view this data.

Customer Use-Case

- Needed a way to easily track performance across key areas.
- Wanted the flexibility to create dashboards without relying on developers.
- Implemented SQUEAKS to build and update KPI dashboards independently, anytime they're needed.

SQUEAKS Metrics & DataSets

SQUEAKS Metrics display key performance indicators in real time, showing a single piece of information over a defined period.

Metric values can be automatically generated from machine data via the SQUEAKS API or IGear CONNECT, or entered manually through the SQUEAKS web app.

SQUEAKS DataSets are tables of data populated through direct connections to SQL or Oracle databases, the SQUEAKS API, or IGear CONNECT.

SQUEAKS + Ignition Integration

SQUEAKS + Ignition Integration

SQUEAKS No-Code Dashboards

Bring Ignition data into live dashboards and metrics—no coding required.

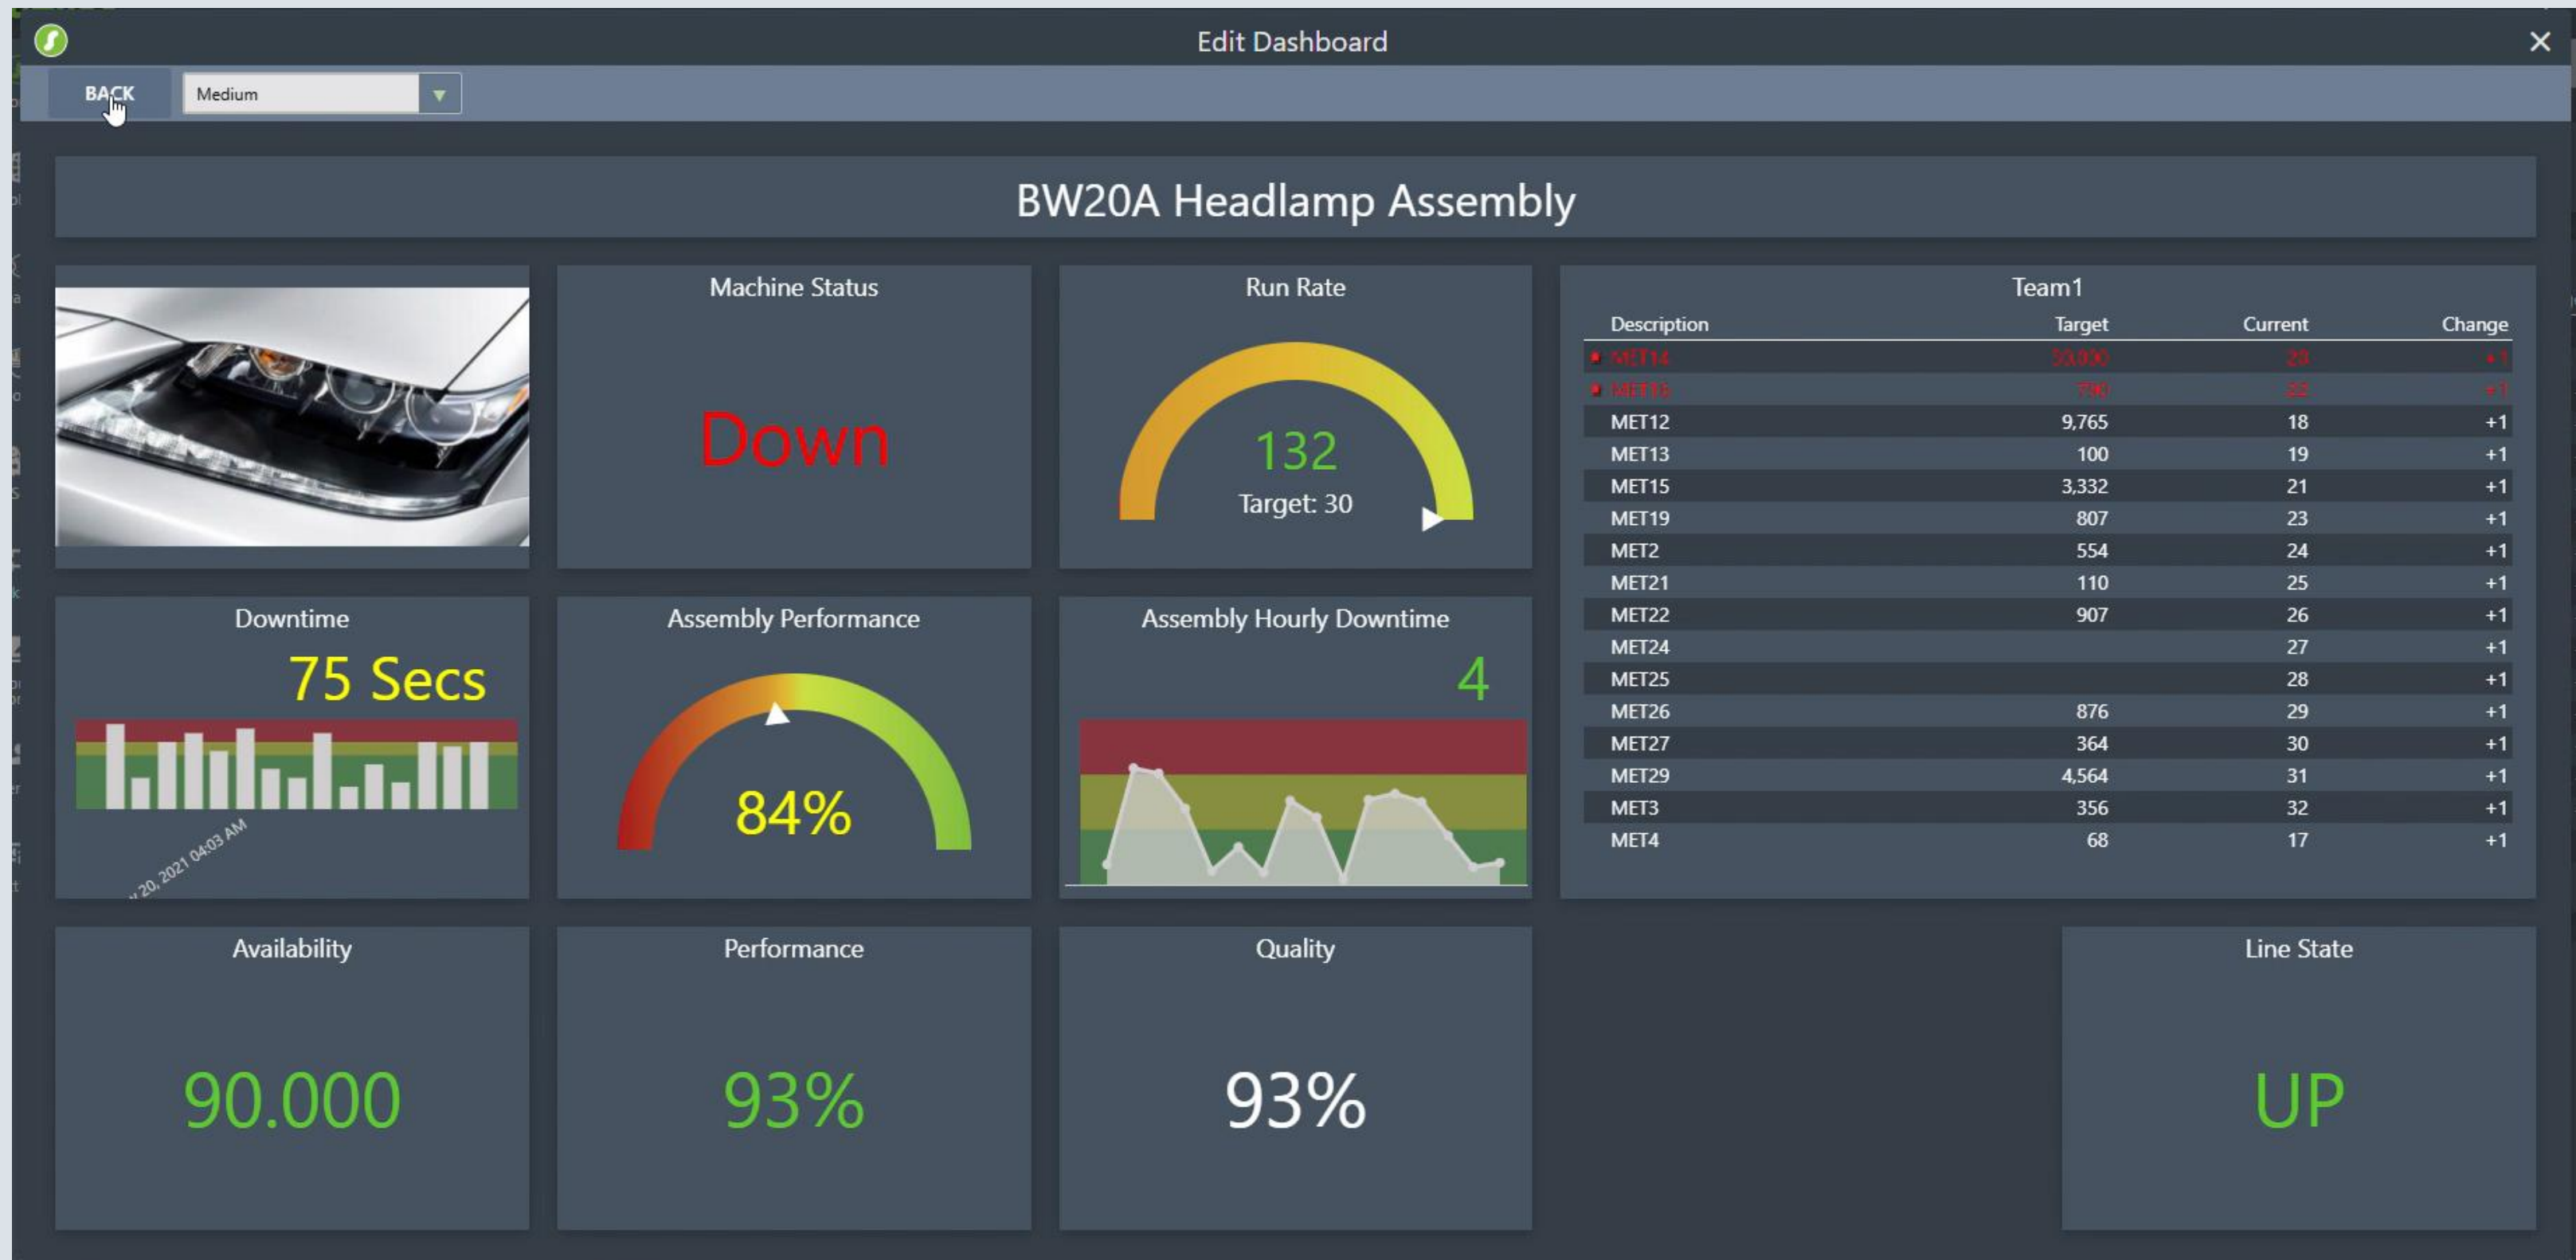

A simple drag-and-drop editor lets users create custom views that highlight their most important information.

Dashboards can display Ignition data alongside data from other sources, providing a complete, unified view.
